

EXPERIMENT 16

Creation and Testing of Virtual Machine Cloning

Aim:

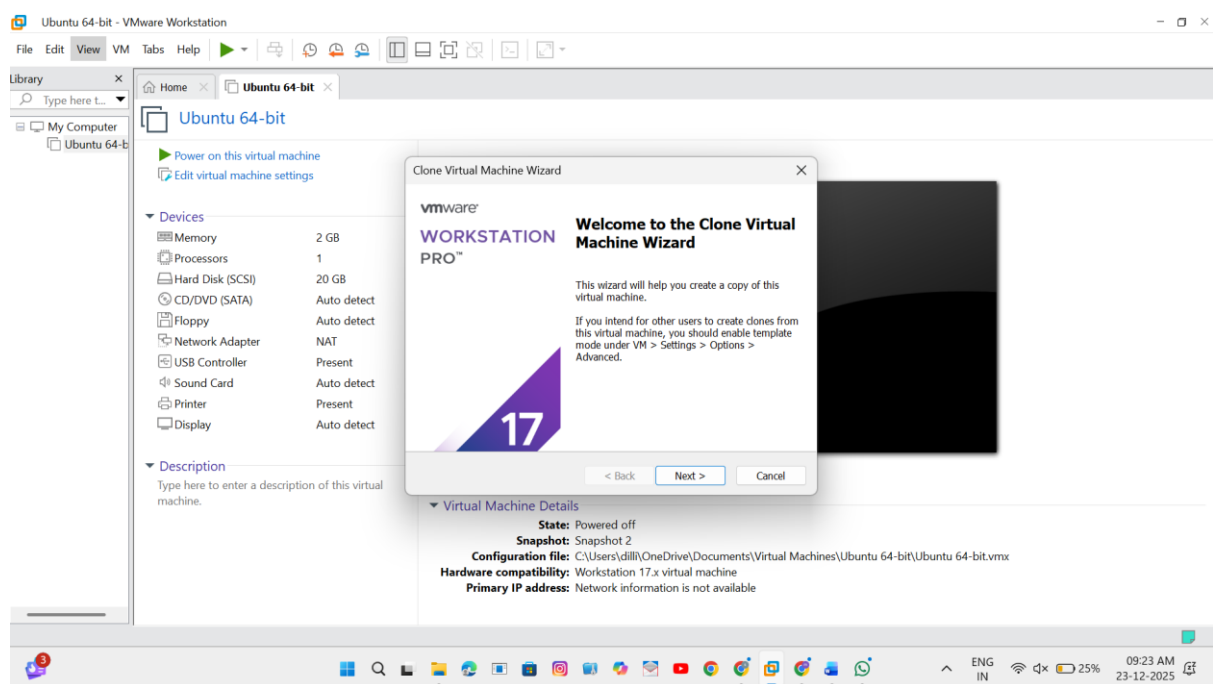

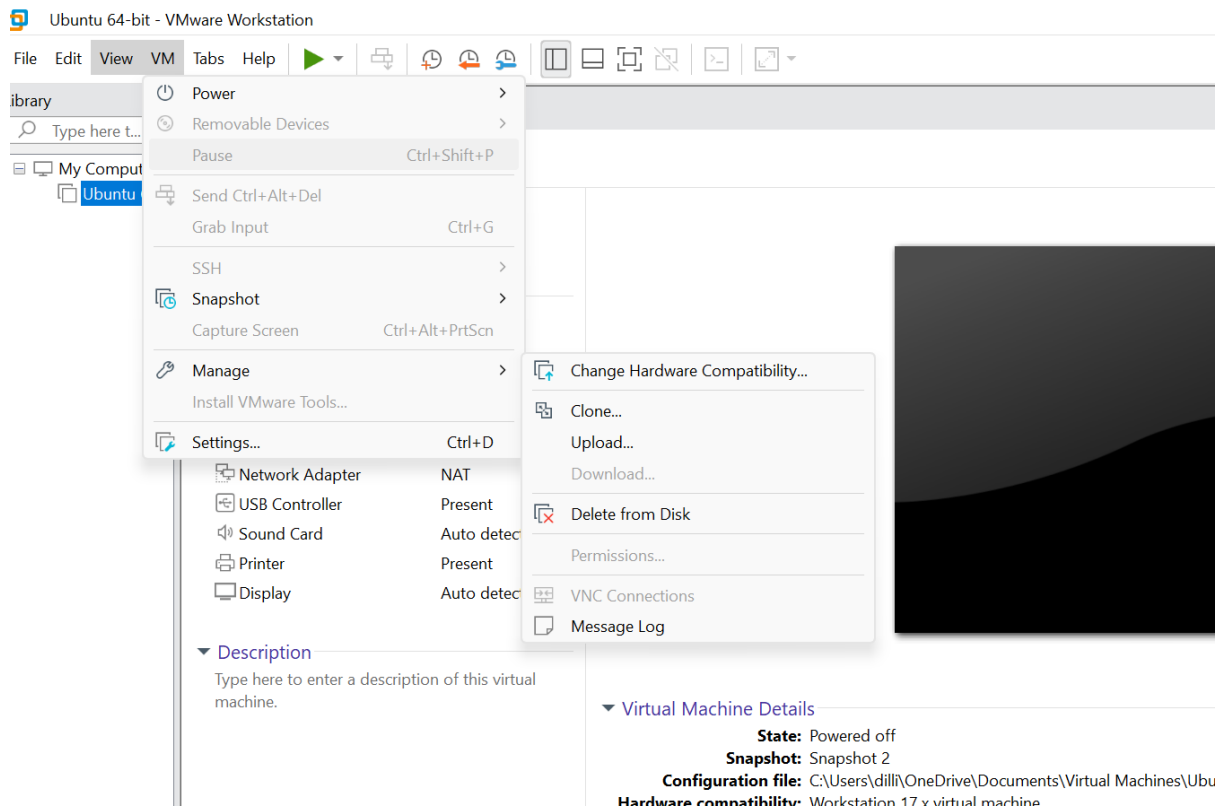

To create a clone of an existing Virtual Machine and test the cloned VM using VMware Workstation.

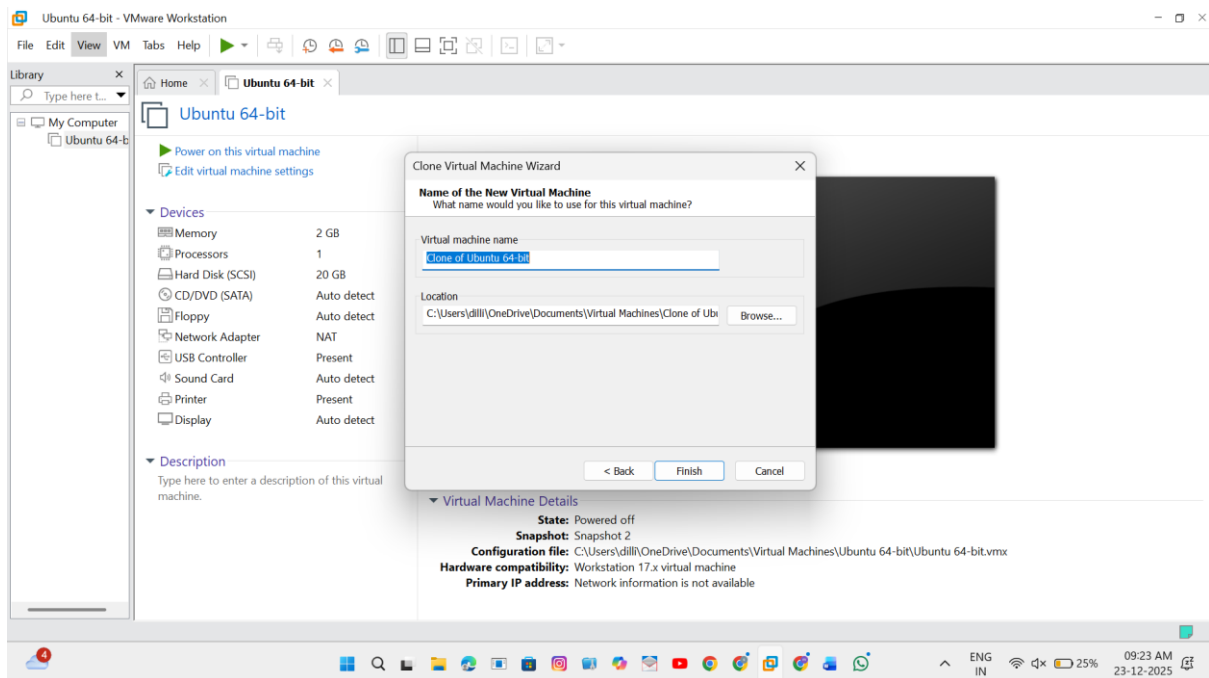

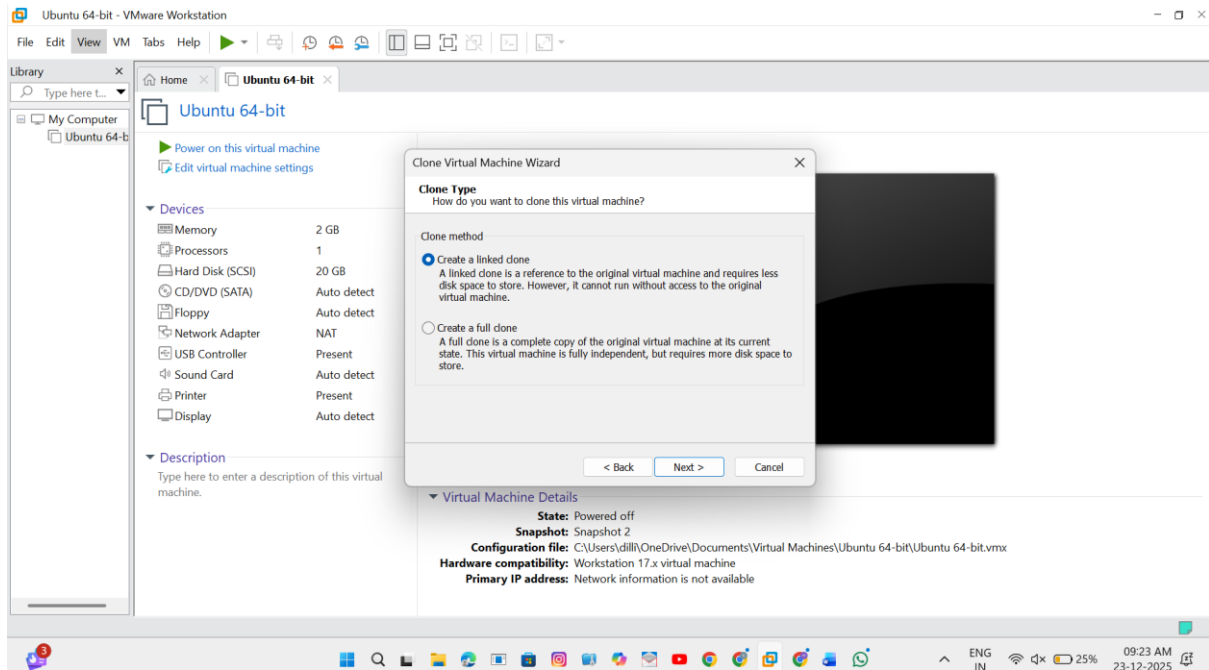

Steps

1. Power OFF the original Virtual Machine.
2. Right-click the VM → Select Manage → Clone.
3. Click Next in the Clone Wizard.
4. Choose Clone from current state.
5. Select Full Clone.
6. Provide clone name and storage location.
7. Click Finish.
8. Power ON the cloned Virtual Machine.

Output

- Clone of the Virtual Machine successfully created.
- Cloned VM runs independently of the original VM.

Result:

Thus, Virtual Machine cloning was successfully performed using VMware Workstation.
