

## **EXPERIMENT 14**

### **Creation of a Virtual Hard Disk using VMware Workstation**

#### **Aim:**

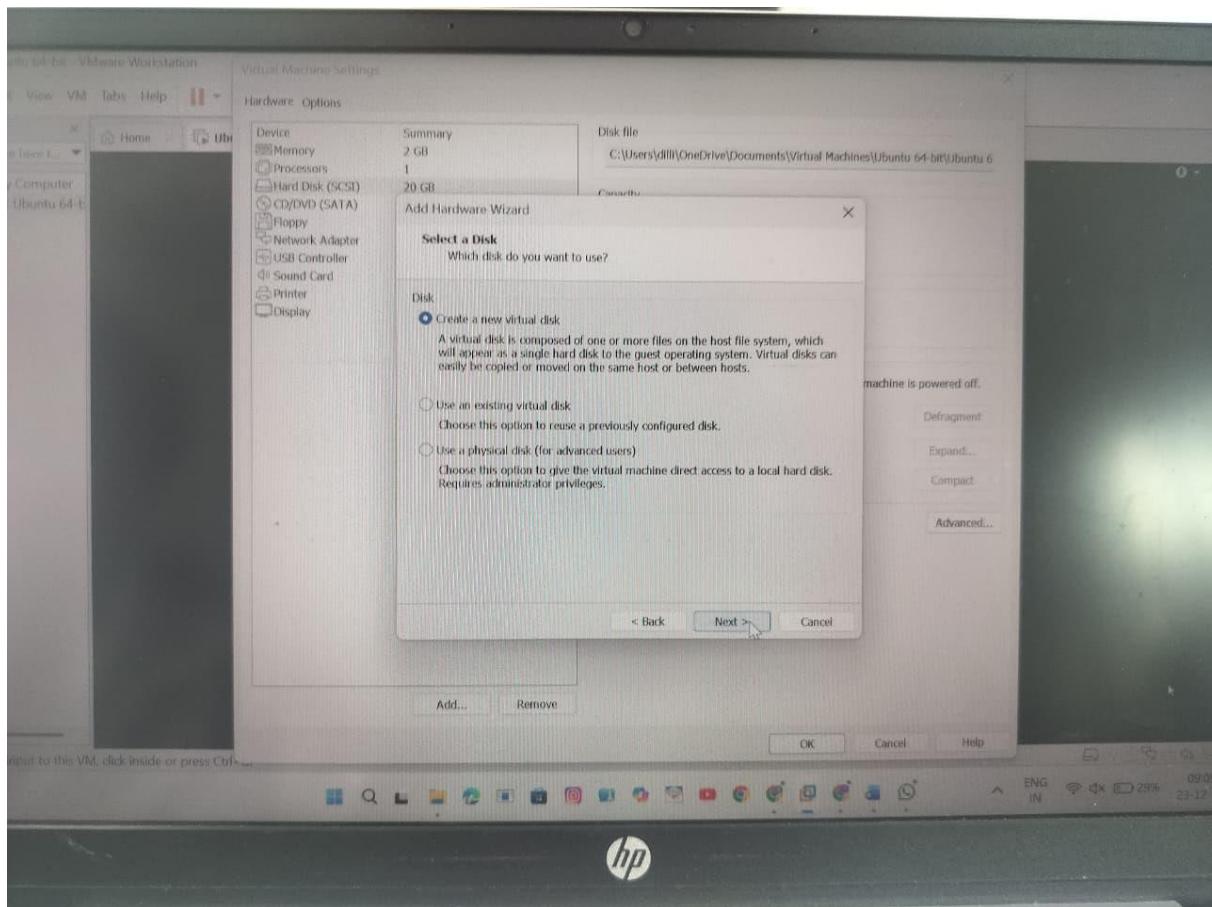

To create and allocate a virtual hard disk for a Virtual Machine using VMware Workstation.

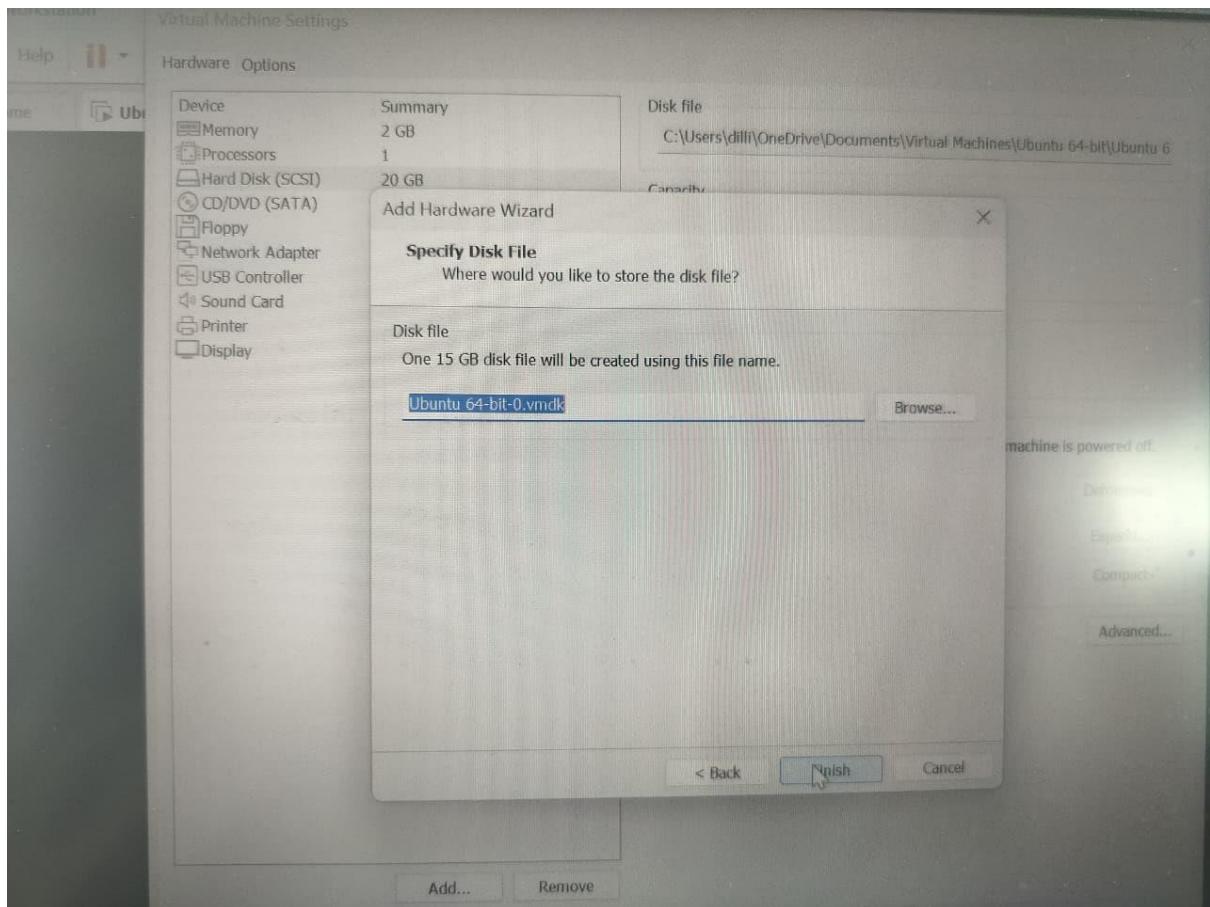

#### **Steps**

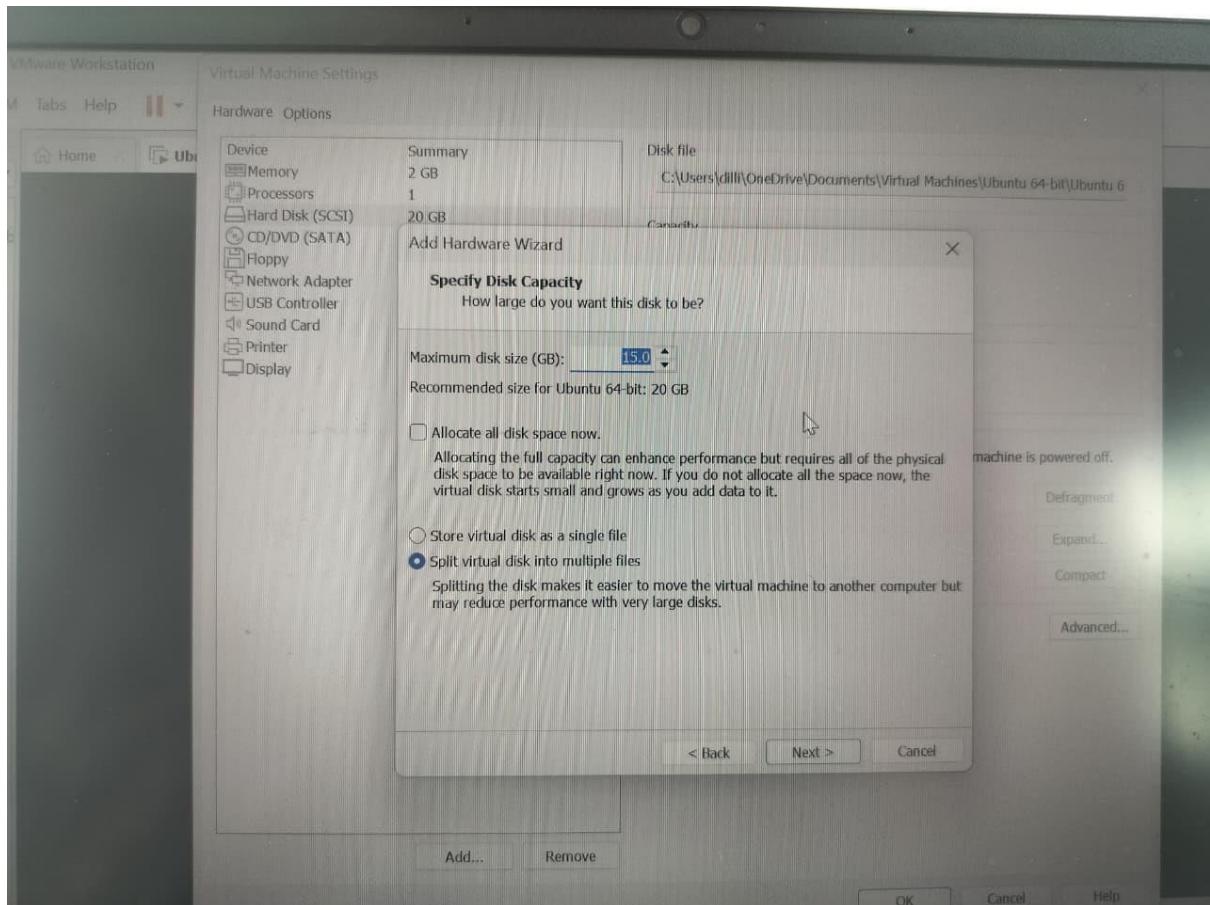

1. Select the Virtual Machine in VMware Workstation.
2. Click Edit Virtual Machine Settings.
3. Click Add → Select Hard Disk → Click Next.
4. Choose SCSI as the disk type.
5. Select Create a new virtual disk.
6. Specify disk size (e.g., 15 GB).
7. Choose Store virtual disk as a single file.
8. Click Finish and apply settings.

#### **Output**

- Virtual Hard Disk successfully created.
- Storage space allocated to the Virtual Machine.

## Result

Thus, a virtual hard disk was successfully created and allocated using VMWare Workstation.
