# EXPERIMENT 11

## Changing Hardware Compatibility of an Existing Virtual Machine

## Aim
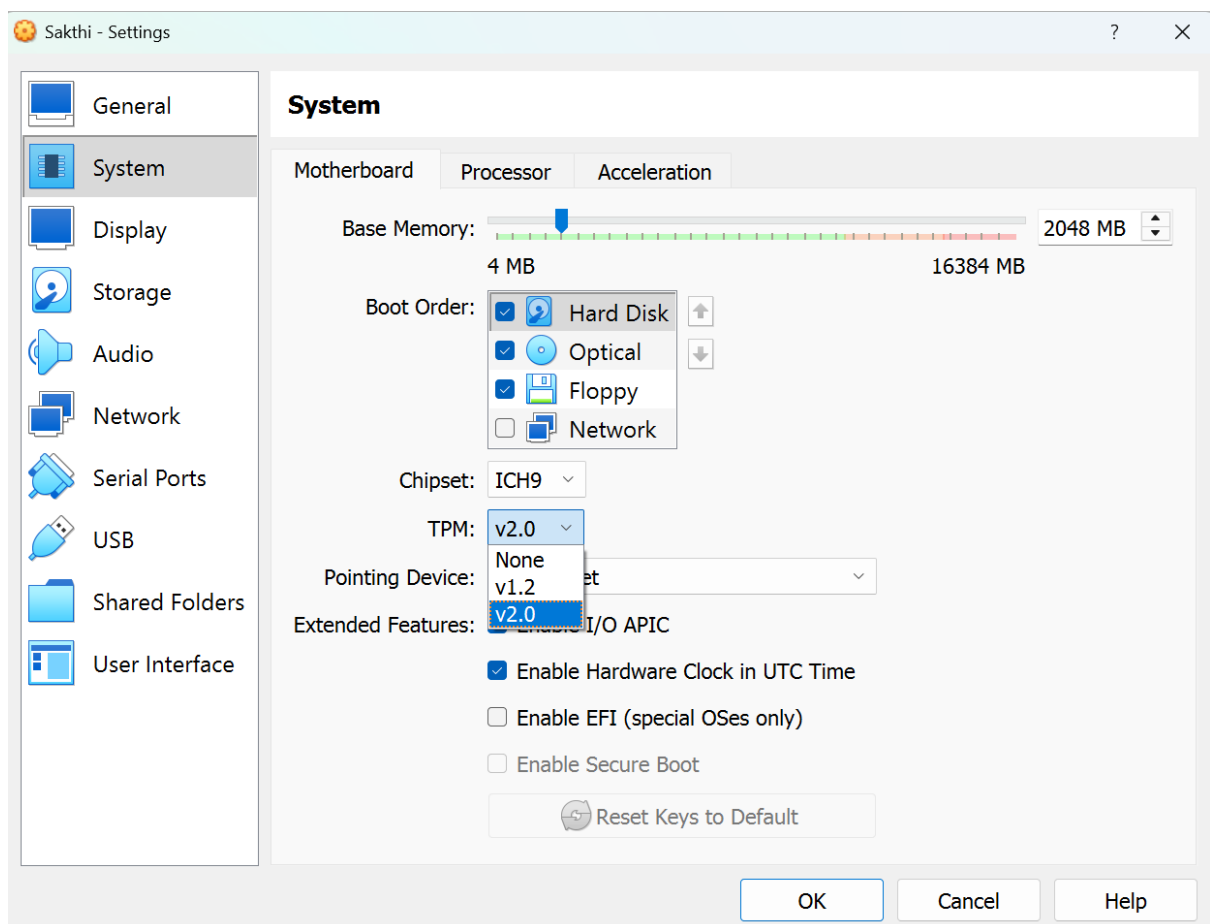

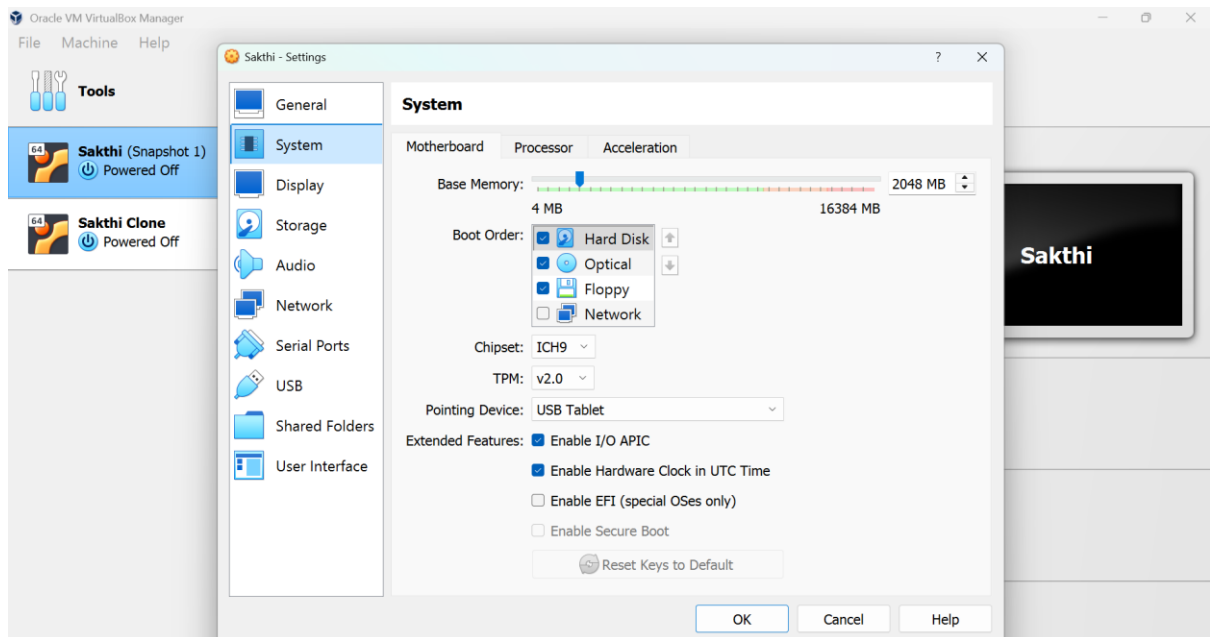

To change the hardware configuration of an already created virtual machine.

## Procedure

1. Power off the VM.
2. Open **Settings**.
3. Modify hardware settings such as CPU, RAM, or storage.
4. Alternatively, create a new VM using clone.
5. Start the modified VM.

## Output

- Virtual machine runs with updated hardware configuration.

# Result

Thus, hardware compatibility of an existing virtual machine was successfully modified using VirtualBox.
